

Building management in the future

Are you going to digitize your building maintenance?

For optimal building comfort, you need to be able to rely on your building management system. Optimising and timely migrating your building system is therefore crucial to ensure your comfort and keep operating costs as low as possible. New technologies offer your users more comfort and can make processes more efficient. When migrating, compatibility is important so that previous investments are maintained.

From 2001, we have been supplying the Priva TC6 Compri HX line. If you have these installed in your building portfolio, we would like to remind you that this particular system generation is currently in the service phase and has support until 1 January 2027.

Depending on the size of your property portfolio, we recommend drawing up timely migration plans to ensure a smooth transition and maintain optimal comfort levels. Gradual migrations have the added advantage that no major initial investment is required to bring your system up to date.

Why choose Priva Blue ID?

Robust and reliable controllers

Intuitive operation

Management via Cloud and/or On-premise

Additional Cloud services possible serving installation performance, energy consumption, custom dashboards, etc.

Modular and flexible structure and easy to expand throughout its lifecycle

One-to-one reuse of project software from previous generation

Current post-regulation hardware does not need to be replaced

Looking for an upgrade that can save you a lot of money on engineering costs?

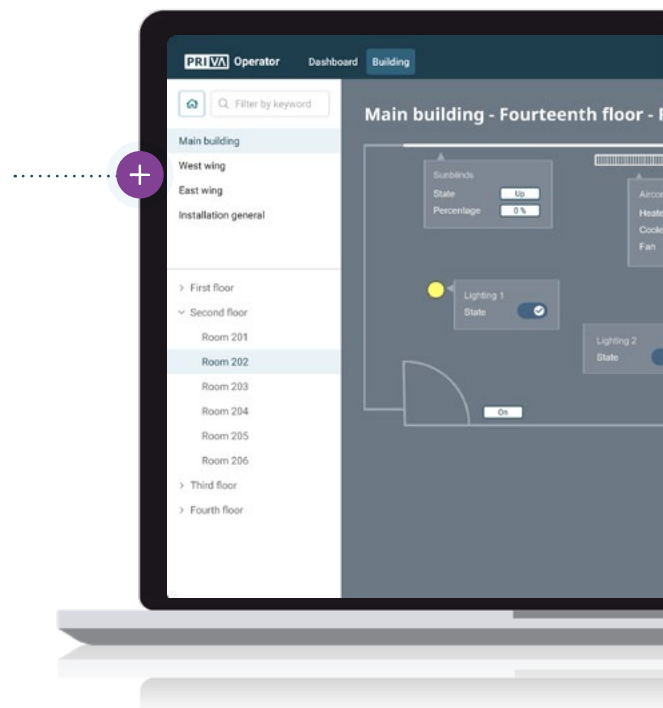

The Priva Blue ID is compatible with the previous generation, allowing substantial savings on engineering costs by migrating the projects. For systems that are migrated after many years, we do recommend that you check whether the installations and comfort areas still require the same functionality, or may require control modification.

The new management platform makes a phased migration easy as you remain in full control throughout the migration. In addition, the new management environment offers more functionality so you can optimise even better.

Conversion to Priva Blue ID offers various advantages:

-  User-friendly interface
-  Possibility to retain all historical data
-  Investments made are safeguarded
-  Saving on engineering costs

This creates a solid foundation for your potential Smart Building platform, on which you can easily expand with third-party Smart Building Applications such as workplace management functionality.

Our account managers will be happy to advise you on this.

They will map out the possibilities and the step-by-step plan for you and help you draw up your CAPEX, so that you can guarantee the continuity and proper functioning of your current installations.

Priva Digital Services

The benefits:

-  Insight into management and maintenance
-  Altijd en overal beschikbaar, browser en device onafhankelijk
-  Always up-to-date and securely connected
-  Three different packages - choose what suits your needs

Are your buildings ready for the future? With Priva Digital Services, you not only make your building ready for the future, you control it. Our comprehensive suite of cloud-based digital solutions offers you - and your buildings - greater accessibility, scalability and resilience than ever before.

Annette van Rijthoven, Head of Building Management, Antoni van Leeuwenhoek Hospital Amsterdam

"We have started the migration of our current Priva HX building management system. Because of the large size, we are pleased that we can do this in phases because continuity of the systems in our hospital is crucial. We can reuse the software, thus saving on engineering costs."

Jos Ruijter, Housing Team Manager, ASR Insurance Utrecht

"We are very pleased with the ability to convert the current Priva building management to Priva Blue ID where the project software can be reused. We have drawn up a plan for this together with Priva and our Priva Partner."

With this step and current technology, we want to lay the foundation for further growth towards a Smart Building, for optimal comfort and experience for all our employees and visitors."
