

Priva Analytics

Create and Share Reports easily

With Priva Analytics, you can extract data reports from your building management system quickly and easily. Do you have a maintenance or support contract with your customers? Then you can automatically share reports with them at the same time. Simply select the data points you are interested in, select the viewing options and frequency with which you want to view them, and you are done.

Added value

Save time and money

Easily create and share data reports yourself.

Simple, periodic reports

Indicate when and how often you could like to receive a report.

Optimize energy consumption

Gain insight into the operations of your building management systems and optimize where needed.

What's in it for you?

- Easily create and automatically share data reports and other information.
- Historical insight into building operation empowers insight into deviations from energy levels immediately visible.
- Greater insight into predictive modelling of building behaviour.

Share insights and raw CSV data

Create and share your insights with ease, so stakeholders and external parties can be informed. In Priva Analytics, you can create clear reports containing charts, scatterplots and tables, all built from the data points of your site. The reports can be configured to generate with new data on a recurring basis automatically, and also shared with other users at the same time. Not only is it possible to share reports, users can also share raw CSV data on a recurring basis to any email address. This allows allowing external third parties to remain informed, for instance to ensure regulatory compliance.”

KPIs for long-term monitoring

It is important to know that the installation devices in a building are functioning properly, and that the spaces are at acceptable comfort levels. Yet there are so many devices and spaces to monitor. This is why KPIs prove to be useful in Priva Analytics: users can configure scatterplots and charts, and specify the acceptable regions of values, in order to have a recurring score. In this way, users can get an indication of device functioning and comfort. And do so quickly, and clearly, for their entire set of buildings under their management.
